Mustertext „Learning Agreement for Traineeships“ PJ

Detailed programme of the training period (detailliertes Praktikumsprogramm):

The programme is based on the principle of joining every day life in the clinic, starting with conferences among the doctors in the clinic, X-ray conferences, the ward, the intensive care clinic and the operating theatre.

The trainee will conduct general anamnesis and examination of patients. Together with a staff member therapy plans will be discussed and developed. The trainee will practice standard procedures such as insertion of venous lines, suturing the skin and wound closure, and other procedures performed frequently in the clinic. The trainee will assist during surgery interventions.

Knowledge, skills and competence to be acquired (im Praktikum zu erwerbende Kenntnisse und Fähigkeiten):

The student is expected to be familiar with the theoretical background in medicine at the European university level. The stay will offer possibilities to use this basic knowledge in practice at the surgical clinic / clinic for internal medicine and the emergency clinic. The student is going to be exposed to emergency cases and elective surgical patients. The goal is to gain medical competence in order to treat and give therapy to patients autonomously.

Mentoring plan (Begleitung während des Praktikums)

Mentoring is mainly performed by structural observation and practical testing. A senior consultant or a staff member participates as a supervisor in the training.

Evaluation plan (Ergebniskontrolle während des Praktikums)

Evaluation takes place either in the end of a structured phase of training or at the end of the complete training period. The form of evaluation is to be defined by the mentor.
